Quarterly Activities Report for three months ending 30 June 2021

HIGHLIGHTS

Buena Vista

- *Fast tracking of proposed DSO operation (Production Phase 1) at Buena Vista with a range of key milestones achieved.*
- *Agreement executed with Hanlon Engineering to develop a plant design and setup the crushing and dry magnetic separation circuit for the proposed DSO production.*
- *Samuels Engineering engaged to update engineering studies for Production Phase 2 – the long term production of a +68% Fe magnetite*
- *Mandate signed with Anglo American for negotiation of offtake agreement for DSO and high grade concentrate production.*
- *Negotiations well advanced for provision of rail and port services for export of Buena Vista production.*
- *Key development strategy for Buena Vista expanded to include value add steel products such as HBI, HPI and pig iron.*
- *Preliminary dry beneficiation testing confirmed highly favorable upgrade characteristics of Buena Vista magnetite ore.*

Corporate

- *Mr Dano Chan, highly experienced and credentialed iron ore production and value add executive appointed as Managing Director.*
- *Mr Matt Latimore, highly experienced resource executive with hands on development and marketing experience appointed as non-executive Director*
- *Heads of Agreement signed with AVF Energy for that company to fund and construct green hydrogen plant at Buena Vista.*
- *Sales and marketing agreement signed with M Resources Trading Pty Ltd.*
- *Mandates signed with key US based Investment banking groups to assist with funding and marketing options including proposed Nasdaq cross listing*
- *Successful completion of \$6 million placement of new shares at \$0.15 per share to raise \$6 million.*
- *Magnum adopts global standard ESG reporting*

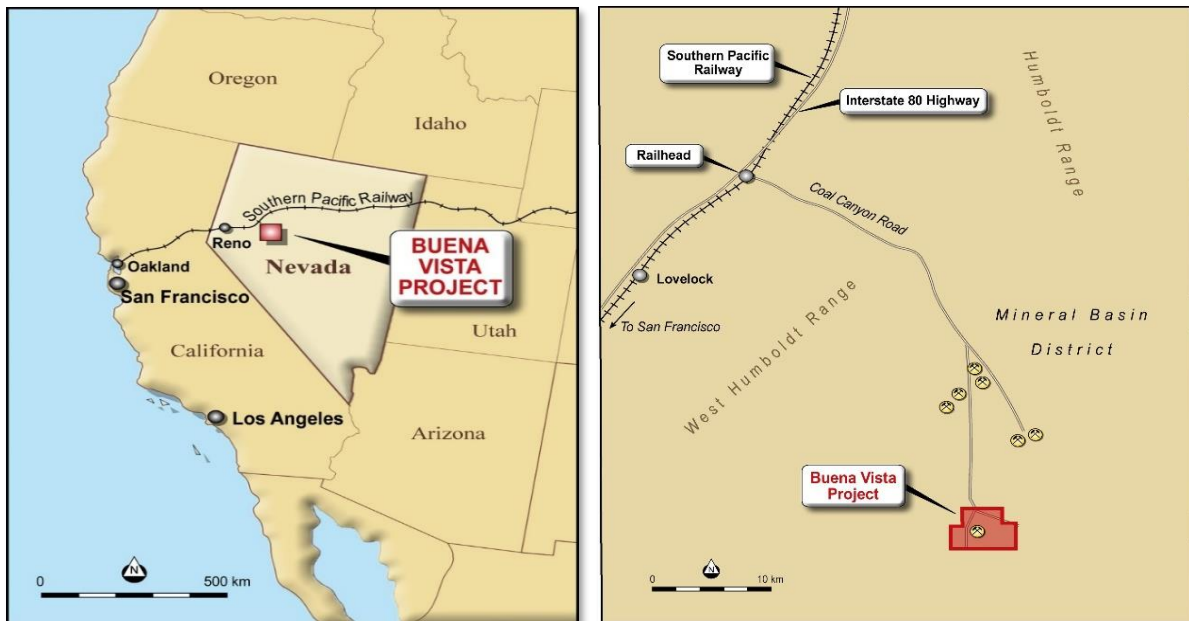

JUNE 2021 QUARTER – SUMMARY OF ACTIVITIES

1.0 OVERVIEW

The June 2021 quarter was a very busy one for Magnum Mining and Exploration Limited (ASX: MGU) (“Magnum” or “the Company”) as the Company accelerated activities for the near term development of its Buena Vista magnetite project located in Nevada, USA.

Buena Vista is a project with boxes ticked for all key development requirements including:

- Robust and well understood JORC 2012 magnetite resource
- Very favourable beneficiation characteristics
- Intermediate and high purity concentrates with low to negligible impurities
- Close to key infrastructure such as road, rail and port
- Tier 1 location: Nevada is rated number one globally as a mining jurisdiction
- Readily available workforce
- Low cost and available power options including gas, solar and potentially hydrogen
- Green magnetite as a highly saleable product
- Choice of key markets including US domestic and export (including Japan and South Korea)

During the June 2021 quarter the Company announced a number of key project development agreements, appointed a number of key people to the executive and board, advanced technical studies to assist with development options, advanced the green credentials of the Buena Vista project and advanced negotiations with logistic providers and for infrastructure access.

Throughout the June 2021 quarter the Buena Vista Project continued to attract significant interest due to the “green” characteristics of the production of magnetite concentrate and the opportunity to develop Buena Vista as a “new age” iron ore project.

The current development strategy for Buena Vista is for the near-term production of direct shipping ore (“DSO”) as a magnetite lump or fines grading +62% Fe (Production Phase 1).

This material will be sourced from a starter pit over the West Deposit and from existing lower grade stockpiles that can be easily beneficiated.

Section Line 1200 (2011 feasibility study) showing example of high grade DSO pod

Production Phase 2 will involve the construction of a beneficiation plant to produce a high grade magnetite concentrate for shipment to domestic and international markets.

In addition the concentrate will be used as a feedstock for the proposed HBI and pig iron production proximal to site.

2.0 KEY PROJECT MILESTONES ACHIEVED DURING THE JUNE 2021 QUARTER

2.1 Mining:

Agreement signed with SRK Consulting to provide mine planning, contractor selection and production of DSO ore shipments (refer to release dated 27 May 2021 and 28 June 2021).

2.2 Environmental:

Confirmation that all the environmental permits required for production to commence from Buena Vista are in place (refer to release dated 28 June 2021).

2.3 Ore Processing:

Agreement executed with GR Engineering Services Limited's (ASX:GRG) US subsidiary, Hanlon Engineering & Associates Inc. to develop a plant design and setup the crushing and dry magnetic separation circuit for the beneficiation of mined ore to ensure a minimum grade of 62% Fe for the proposed DSO shipments (refer to releases 28 June 2021 and 12 February 2021).

Kimball Equipment has been engaged to provide the crushing and screening equipment rental.

2.4 Port:

During the June 2021 quarter Magnum signed an MOU with the Port of Stockton (refer to release dated 28 June 2021). This port is serviced by Union Pacific Railway. Magnum and the Port of Stockton are now working towards a final commercial agreement.

In addition Magnum commenced negotiations with the Richmond Levin Terminal. This port is also serviced by Union Pacific Railway and can provide an additional export Port for shipments of concentrate or for trans- loading.

2.5 Shipping:

A review of shipping logistics commenced with initial studies indicating that Panamax Vessel ocean freight can be achieved by two port loading commencing at Stockton Port with a top up at the Richmond Levin Terminal.

2.6 Rail:

Magnum has commenced negotiations for an agreement for rail haulage from Magnum's proposed load out facility at Colado to the Port of Stockton and the Richmond Levin Terminal.

3.0 APPOINTMENT OF MANAGING DIRECTOR AND BOARD REFRESH

Mr Dano Chan, highly experienced in the production, trading and marketing supply chain for iron ore and its value add products, joined the board of Magnum on 12 April 2021 and was appointed to the position of Managing Director 19 April 2021 (refer to release dated 12 April 2021 and 19 April 2021).

Mr Chan has brought to Magnum over 30 years of wide industry experience gained from key senior roles with leading companies including Iscor/Kumba Resources AG, Glencore AG and the Noble Resources Group.

Mr Chan is a UK citizen and has a Bachelor of Science (Chemical Engineering) from the University of Utah, USA.

With Mr Chan's appointment and subsequent re-location to the United States the Company established a working office in Salt Lake City which was fully operational in early June 2021 (refer to release dated 11 May 2021).

On joining the board and being appointed as Managing Director Dano Chan commented

"We are initially focusing on mining the high grade pods which allow Magnum to start generating cash flow quickly and accelerate the development, size and scale of the mine to take advantage of the record iron ore prices. We expect this fast-track Direct Shipping Ore ("DSO") strategy to bring value to our shareholders, limit shareholder dilution and also help fund the expansion of the mine and growth plans for future HBI Green Steel product.

During the June 2021 quarter Magnum also welcomed experienced mining executive Matt Latimore to the Board.

Matt Latimore is the Founder and President of M Resources Pty Ltd, a company he established in 2011 for the marketing, investment and trading of steelmaking raw materials, with a focus on metallurgical coal.

M Resources has achieved significant market success and to date has shipped over 400 cargoes of metallurgical coal as principle to global steel mills. In addition, it currently has the

exclusive marketing rights for Stanmore Resources (SMR) and Bowen Coking Coal (BCC) in Australia and Allegiance (AHQ) New Elk mine in the US.

Through MetRes, a company 50 % owned by M Resources, Matt also recently purchased the Millennium and Mavis Downs coal mines from Peabody.

Prior to founding M Resources, Matt was GM Sales and Marketing for Wesfarmers Curragh coal for 10 years, responsible for global sales to steel makers and power utilities, rail and port and finance functions.

Prior to that, Matt held various positions with Mitsui & Co Coal Department.

Matt holds a Master of Business Administration from the Australian Graduate School of Management, a degree in International Business from Griffith University, Diploma of Export Management from the Australian Institute of Export and an Advanced Diploma of Leadership and Management from the University of Western Australia.

In addition he is a graduate of the Australian Directors Course (GAICD) and the Columbia University Senior Executive Program in New York.

During the quarter Mr Hugh Callaghan, non-executive director retired from the board (refer to release dated 4 May 2021).

4.0 EXCLUSIVE MANDATE SIGNED WITH ANGLO AMERICAN TO NEGOTIATE DEFINITIVE OFFTAKE TERMS OVER BUENA VISTA MAGNETITE PRODUCTION

On 11 June 2021, Magnum announced the execution of a Mandate Letter and an Indicative Term Sheet with Anglo American, pursuant to which Magnum and Anglo American will exclusively negotiate definitive documents for the offtake and prepayment financing in relation to Magnum's Buena Vista Iron Ore project.

The Mandate Letter provided for a 60-day exclusivity period to finalise a binding agreement.

The purpose of the offtake arrangement would see Anglo American purchase a minimum of 560,000 tonnes and up to an estimated 800,000 tonnes of the direct shipping ore ("DSO") - 62% and/or 65% fines produced from Buena Vista ("Production Phase 1") and secure the right of first refusal for the purchase of 100% of the production of iron ore concentrate, hot briquetted iron (HBI) and pig iron from the project ("Production Phase 2").

In addition, the agreement would provide Anglo with an option to assist in the financing for the development of Production Phase 2 at Buena Vista.

Subject to necessary due diligence, 100% of the DSO will be bought by Anglo American on a secured prepayment basis with a prepayment of US\$8 million. If requested by Magnum, Anglo American may advance an additional 'vessel by vessel' prepayment of US\$4 million.

The prepayments will assist with the payment for infrastructure and working capital and allow Magnum to accelerate DSO production as it uses its secured monthly cash flow from the offtake agreement.

Commenting on the Managing Director, Mr Dano Chan, said "*Magnum is systematically delivering on its strategy of shipping ore in 2021 and the proposed agreement with Anglo American of a long-term offtake and financing is intended to be a key step in this process.*"

5.0 SAMUEL ENGINEERING ENGAGED TO UPDATE ENGINEERING DESIGN FOR PRODUCTION PHASE 2 CONCENTRATE PRODUCTION PLANT

During the June 2021 quarter Magnum reached agreement for the engagement of Samuel Engineering to update and complete basic plant engineering design for the Production Phase 2 concentrate plant at Buena Vista (refer to release dated 15 June 2021). This plant will be designed for the long term production of a high-grade + 68% Fe wet concentrate from Buena Vista.

Under Production Phase 2 Magnum is targeting shipments of +68% Fe premium magnetite concentrate to commence in Q3 of 2022.

The proposed beneficiation plant is already fully permitted, and water licenses are already in place for the lifetime of the mine. All permits for the wet concentrate production plant are already in place and approved.

Samuel Engineering is a multi-discipline engineering, procurement, and construction management company with over 200 staff and located in Denver. Samuel Engineering completed a pre-feasibility study of the iron ore concentrate plant for the Buena Vista project in 2013 and plans to use that effort to bring forward and complete the work as early as September 2021.

6.0 SALES AND MARKETING AGREEMENT FINALISED FOR MAGNETITE CONCENTRATE AND VALUE ADD PRODUCTS FROM BUENA VISTA

On 20 April 2021 Magnum announced the execution of a non-exclusive sales and marketing agreement with M Resources Trading Pty Ltd (“M Resources”).

This agreement is for M Resources to act as Magnum’s sales agent across the United States for sales of magnetite concentrate and value add products such as Hot Briquetted Iron (“HBI”), High Purity Iron (“HPI”), pig iron and steel.

7.0 SIGNIFICANT PROGRESS ACHIEVED TOWARDS GREEN STEEL DEVELOPMENT

During the quarter Magnum shipped un-beneficiated samples of its Buena Vista iron ore to a consortium of international engineering firms specialising in Hot Briquetted Iron (“HBI”) and Pig Iron manufacturing design (refer to release dated 27 April 2021).

Based on the metallurgical test results from the subsequent sample testing it was determined that the Buena Vista ore is suitable for a HBI and Pig Iron steel production. The decision was then made to specifically design a “green” HBI and Pig Iron manufacturing process for the Project.

This proposed manufacturing plant will be designed based on mature and industrially proven technologies. During the quarter Magnum also commenced discussions with several international firms in Europe and North America to provide plant assembly services and operational assistance.

This is an exciting opportunity for Magnum because by utilising locally available Biomass and the exclusive Green Hydrogen supply from AVF Energy (see ASX announcement 20 April 2021 and summary in this quarterly), Magnum will be a first mover in producing environmentally friendly steel products for supply to the US domestic and International steel markets.

8.0 HEADS OF AGREEMENT EXECUTED TO CONSTRUCT A GREEN HYDROGEN PLANT AT BUENA VISTA

On 20 April 2021, Magnum announced the signing of a Heads of Agreement with AVF Energy Inc. for that company to fund and construct a commercial scale green hydrogen plant at Buena Vista.

AVF is a Nevada based company that is active in the green hydrogen market having executed a MOU agreement with NYSE listed Dominion (a US based \$US60 billion infrastructure company) as an equity partner in a green hydrogen production project in the USA.

AVF proposes to produce green hydrogen from waste on a commercial scale for the proposed Magnum operations at Buena Vista.

9.0 COMPLETION OF PRELIMINARY DRY BENEFICIATION TEST WORK CONFIRMED HIGHLY FAVOURABLE UPGRADE CHARACTERISTICS OF BUENA VISTA ORE

During the June 2021 quarter Magnum provided an update (ASX release: 28 June 2021) on a first pass evaluation of the dry beneficiation characteristics of lump samples of varying Fe grade from Buena Vista.

This sampling was undertaken as part of the Production Phase 1 studies to determine the upgrade characteristics of Buena Vista ore using relatively coarse crushes and simple dry screening followed by magnetic separation.

As reported to ASX the results of this programme were highly encouraging confirming the positive upgrade characteristics of +60% lump ore but also demonstrating the potential for lower grade ore can be beneficiated to at or around 60% Fe with a simple -5mm crush and dry screening.

Five rock chip samples were collected across Buena Vista and each was then crushed and dry screened to a -5mm+2mm fraction and a -2mm fraction and then each fraction subject to a Davis Tube magnetic separation and then assayed by ICP and XRF.

Samples Taken

Sample Prefix	Location	Coordinates	Sample Description
MBV001	Iron Horse	39° 58.592" N, 118° 09.665" W	Massive Mgt, estimated Mgt grade +60%
MBV002	West Pit	39° 58.395" N, 118° 10.087" W	Massive Mgt, +50%
MBV003	West Pit	39° 58.380" N, 118° 10.057" W	Massive Mgt, +50%
MBV004	West Pit	39° 58.370" N, 118° 10.082" W	Scapolitised Mgt, +45%
MBV005	Mining Waste dump	39° 58.462" N, 118° 09.990" W	West Pit mine waste, scapolitised Mgt,+45%

Table 1: Sample Locations and descriptions MBV001-MBV005

Head Grade Assay Results (summarised)

Sample	Fe	Al ₂ O ₃	P ₂ O ₅	S	SiO ₂	TiO ₂	V ₂ O ₅
MBV001	65.6%	0.71%	0.30%	0.007%	2.61%	1.97%	0.63%
MBV002	59.9%	1.03%	0.66%	0.008%	8.19%	0.21%	0.36%
MBV003	67.2%	0.73%	0.16%	0.001%	2.48%	0.47%	0.41%
MBV004	37.5%	7.96%	0.34%	0.004%	25.06%	0.64%	0.23%
MBV005	38.9%	7.95%	0.13%	0.004%	24.27%	0.52%	0.21%

Table 2: Head assay results MBV001-MBV005

-5mm+2mm fraction results (magnetic separation)

Sample	Fe	Al ₂ O ₃	P ₂ O ₅	SiO ₂	TiO ₂	V ₂ O ₅	Weight %
MBV001	68.8%	0.42%	0.05%	0.90%	1.06%	0.65%	95.1%
MBV002	66.1%	0.50%	0.12%	5.37%	0.16%	0.41%	87.7%
MBV003	69.7%	0.40%	0.05%	1.10%	0.37%	0.41%	92.2%
MBV004	59.3%	3.13%	0.04%	9.67%	0.18%	0.36%	59.2%
MBV005	63.8%	2.11%	0.01%	6.00%	0.23%	0.34%	53.5%

Table 3: Assay Results magnetic proportion -5mm+2mm fraction MBV001-MBV005

5.2 -2mm fraction results (magnetic separation)

Sample	Fe	Al ₂ O ₃	P ₂ O ₅	SiO ₂	TiO ₂	V ₂ O ₅	Weight %
MBV001	67.7%	0.58%	0.13%	1.57%	1.25%	0.64%	96.1%
MBV002	66.6%	0.51%	0.15%	4.43%	0.16%	0.40%	88.1%
MBV003	67.4%	0.72%	0.15%	2.19%	0.49%	0.41%	92.7%
MBV004	62.7%	2.23%	0.03%	6.95%	0.14%	0.39%	55.4%
MBV005	66.5%	1.31%	0.02%	3.61%	0.20%	0.35%	53.2%

Table 4: Assay Results magnetic proportion -2mm fraction MBV001-MBV005

Table 2: Primary & Screened fractions – Total Fe

Table 2 demonstrates that all samples beneficiated to higher Total Fe grades with particularly impressive results achieved for the samples which were grading sub 40% Total Fe as a primary grade (uncrushed, un-beneficiated)

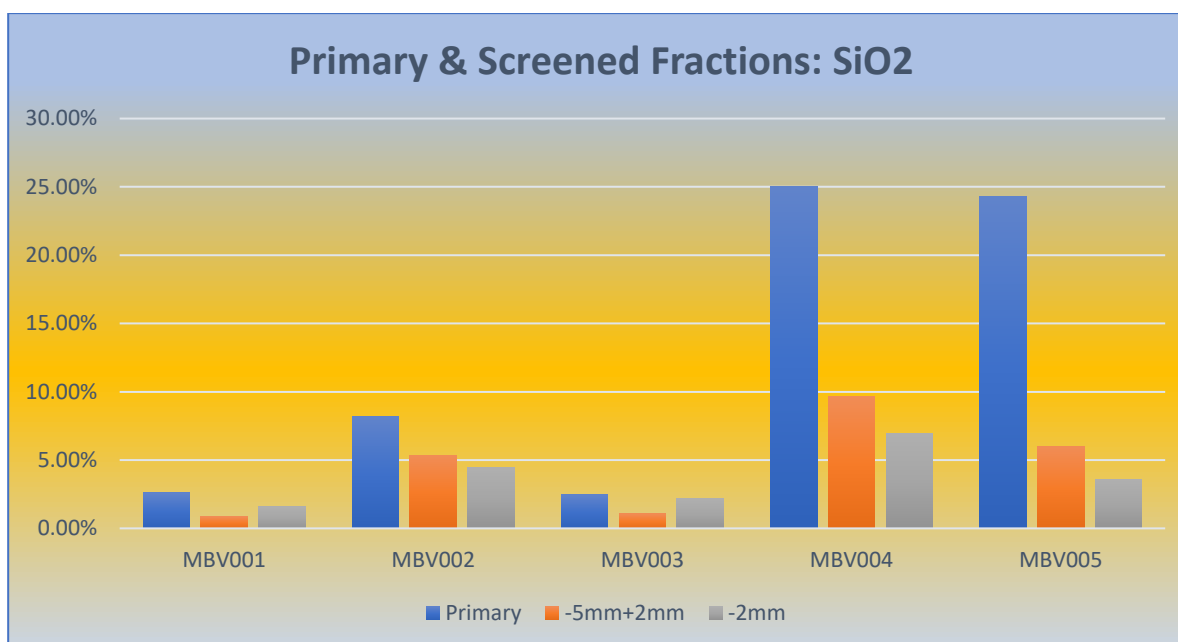

Table 3: Primary & Screened fractions – Silica (SiO₂)

Table 3 demonstrates that all samples confirmed the expected reduction in the silica impurity with the higher grade samples (MBV 001-003) showing silica levels consistent with the high grade magnetic concentrate range. As to also be expected the crush and screen removed significant silica from the lower grade samples (MBV 0004, 005) with the finer screen showing the best results.

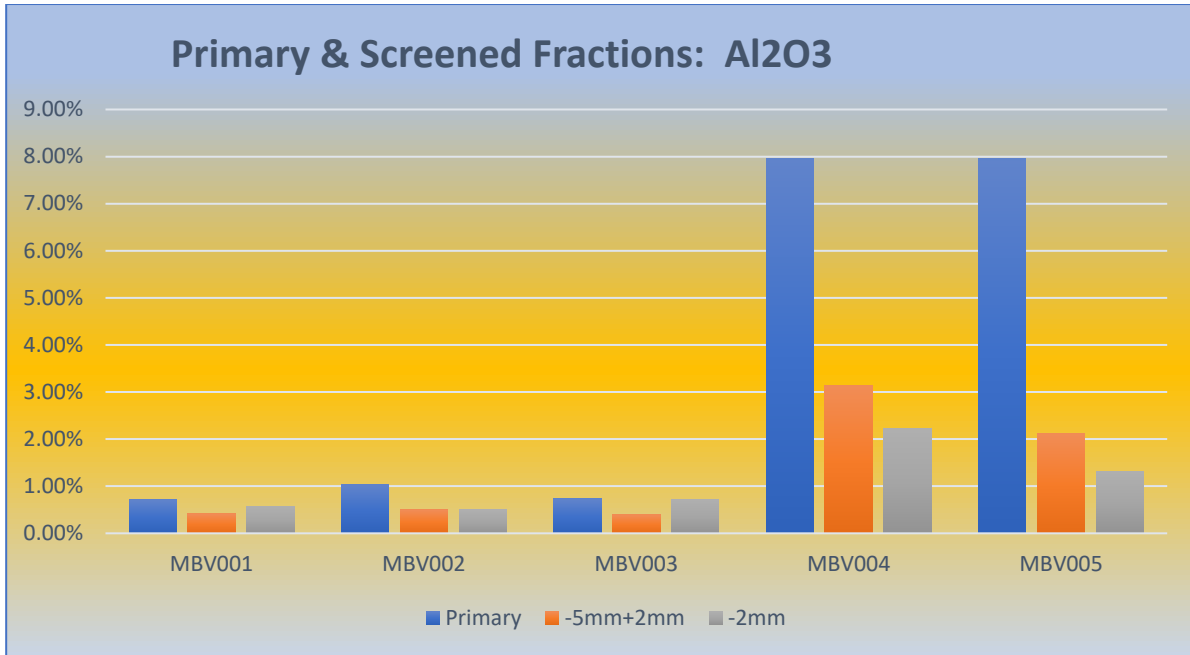

Table 4: Primary & Screened fractions – Alumina (Al₂O₃)

Table 4 which summarises alumina showed similar beneficiation characteristics to silica.

Table 5: Primary & Screened fractions – Phosphorous (P₂O₅)

Table 5 which summarises the removal of phosphorous through the two screen sizes also demonstrates that the dry screen and -5mm crush upgrades the Buena Vista ore to a prime low phosphorous concentrate.

In summary the results achieved with the two lower primary grade samples being MBV004 and MBV 005 provide a potential opportunity for lower grade Buena Vista ore to be upgraded to a saleable concentrate using a simple crush and dry beneficiation. This has potential significant cost and production benefits for both production phases.

Both of these samples for example upgraded to +59% Fe with a corresponding reduction in impurities (note the P₂O₅ and its reduction by a factor of nearly 6 times).

The silica content still however remained and in the preferred range for HBI and HPI feedstock (5-10%).

Of equal importance was the weight recovery percentage of each of the samples which indicated that a recovery of around 90% magnetite for each fraction.

9.0 OPERATIONS AT GRAVELLOTTE REMAIN CONSTRICTED

Activities at the Company's Gravelotte emerald project (located in the Limpopo Province in South Africa) were still limited to care and maintenance and desk stop studies as a result of travel restrictions and restrictions placed on site activities due to the Covid pandemic (refer to release dated 12 April 2021).

The recent rioting in South Africa did not affect the project site or the local community.

During the March quarter Magnum arranged for the delivery of a parcel of "raw" emeralds for delivery to a United States based integrated gem cutting and marketing company. Delivery of this parcel was unfortunately held up because of the situation within South Africa but it is hoped that results of the testing will be available in the September quarter.

As a result of the Company's focus on the Buena Vista magnetite project Magnum is assessing the best option for Gravelotte moving forward. One option may be the sale of the asset.

10.0 PLACEMENT of SHARES TO RAISE \$6 MILLION SUCCESSFULLY COMPLETED

On 7 May 2021, Magnum completed a \$6 million placement to institutional and sophisticated investors at an issue price of 15 cents per share ("Placement") (refer to announcement dated 7 May 2021).

Magnum directors Matt Latimore and Don Carroll were to also invest up to \$250,000 each (\$500,000 in total) on the same Placement terms and subject to shareholder approval, which was subsequently received 20 July 2021.

Magnum received strong demand from existing institutional and sophisticated investors for this capital raising.

The Company also saw support from several new institutional and sophisticated investors and as a result demand exceeded the placement capacity.

11.0 APPOINTMENT OF US BASED INVESTMENT BANKS TO SUPPORT PROJECT FINANCING AND MAGNUMS US BASED "GREEN STEEL" STRATEGY

During the June 2021 quarter Magnum executed non-exclusive mandates with two New York based investment banks and advisors, RK Equity Advisors LLC and Pickwick Capital Partners, LLC (refer to release dated 19 April 2021).

RK Equity has funded US iron ore projects and will act as a strategic advisor to Magnum, providing industry market analysis, peer benchmarking and comparable company assessments, including the identification of long-term strategic shareholders in North

America. RK Equity has also advised a variety of corporates and investors across the lithium-ion battery and technology metals supply chain.

Pickwick is a licensed investment bank, broker-dealer and fund placement advisory firm. Pickwick provides an extensive array of services to middle market companies and institutional funds across the United States and abroad.

12.0 ENGAGEMENT OF ADVISORS FOR PROPOSED NASDAQ CROSS LISTING

During the June 2021 quarter Magnum engaged its New York based advisors, RK Equity Advisors LLC and Pickwick Capital Partners LLC, to undertake a cross listing on NASDAQ International in the second half of 2021.

The listing when completed will allow Magnum to better engage with institutional and sophisticated investors in the United States.

13.0 ADOPTION OF GLOBAL STANDARD ESG REPORTING

During the June 2021 quarter Magnum adopted an Environmental, Social and Governance (“ESG”) framework with 21 core metrics and disclosures created by the World Economic Forum (“WEF”) (refer to announcement dated 18 June 2021).

Commenting on the adoption of the ESG, Managing Director of Magnum Dano Chan said *“I am delighted our Company has adopted this universal ESG framework to measure and report our ESG performance. ESG and impact investing are key areas of interest for institutional investors and fund managers and Magnum is well positioned with its green steel initiatives.”*

The Board of Magnum has instructed management to set up an impact measurement plan for each sustainability area which includes, but is not limited to, governance, anti-corruption practices, ethical behaviour, human rights, carbon emissions, land use, ecological sensitivity, water consumption, diversity and inclusion, pay equality and tax payments.

To ensure that Magnum can measure, monitor, and report on its ESG progress, the Company has engaged impact monitoring technology platform Socialsuite to streamline the outcomes measurement and ongoing ESG reporting process. The Company’s goal is to demonstrate commitment and progress on its ESG scorecard, but more broadly, requires progress on a range of ESG benchmarks as set out by the WEF’s ESG White Paper.

14.0 EXPLORATION INTERESTS

The following tenement information is provided in accordance with ASX Listing Rule 5.3.3 for the quarter ended 30 June 2021:

Buena Vista Project
